

Creating Training Miracles

Making the Big Difference.

Creating Training Miracles was written with the conviction that effective training develops new skills, transforms potential and increases the capacity of people to meet the challenges that confront them in a rapidly changing world. The philosophical position is that seeing a person become more empowered as a result of learning is miraculous.

Creating training miracles requires total commitment to excellence and a genuine belief that all people have the capacity to learn. In a world where values, beliefs and self-esteem are constantly being challenged, the business of learning takes on an added responsibility. Learning provides the gateway to opportunities that help people cope with the ambiguity, stress and change that these challenges often create.

This book is an opportunity to share techniques from two of Australia's most experienced and respected learning professionals.

The book was recognized as the International Best Business Book for the Asia Pacific Region by Booz-Allen Hamilton of New York and the Financial Times of London.

Every serious learning professional should have a copy of this wonderful collection of advanced training ideas and strategies.
